

# Pendulum Wave Machine (aka Pendula Fantastica)

## Technical Specifications

Area required for performance	footprint of installation	5m x 3m
	suggested area including audience space	15m x 3m
Height required		3.5m
Area required for setup and derig	We can use the 'stage' area plus the audience space.	
Type of ground	The 'machine' can be installed on hard standings or grassed areas. The area for the footprint should have a slope of no more than 50cm over 5m (although we <i>are</i> able to site on slopes greater than this by prior arrangement and agreement)	
Power	If the legs are illuminated with our internal LEDs	240V, <3A
	If legs AND 4 LED PARs are illuminated	240V, <8A
	If no illumination is needed, then no power is needed.	
	We also have a rechargeable battery powered lighting option	
Get-In	less than 2 hours from arrival at site please note that there are heavy parts to the machine, so we require vehicle access to within 25m of the site	
Get-out	less than 2 hours from our vehicle's (re-)arrival at site please note that there are heavy parts to the machine, so we require vehicle access to within 25m of the site	
Crew	The setup and de-rig is usually done by the same 2 performers who will run the show. If 2 local crew can be provided, then the get-in and get-out can each be reduced to 1 hour	
Special Access	We provide our own working platform for any work at height. All work is carried out from a platform no more than 2m from the ground
